

What is DisasterAWARE?

DisasterAWARE (**All-hazard Warning, Analysis and Risk Evaluation**) is an integrated platform providing situational awareness, decision support, and information exchange capabilities to disaster management decision makers around the world to support endeavors of humanitarian assistance in the realm of disaster management and risk reduction.

Who can have access to DisasterAWARE?

The full range of capabilities is available via secured websites requiring that users are registered and associated with a registered organization. Most disaster management professionals should begin by requesting access to the EMOPS (**Emergency Operations System**) site at www.pdc.org/emops.

Much of the functionality and content is also publicly available via the PDC **Global Hazards Atlas** at www.pdc.org/atlas or via the free PDC mobile application **Disaster Alert** currently available through the iTunes AppStore and the Android Marketplace. See the PDC website, www.pdc.org for links to the Disaster Alert application download page, a rich library of information resources, and links to Facebook and Twitter feeds that broadcast Hazard Alerts for the benefit of the general public. To establish a MyPDC account (no organization registration required), go to <http://www.pdc.org/iweb/pdcregistration.html>

What are the System Requirements and User Pre-requisites?

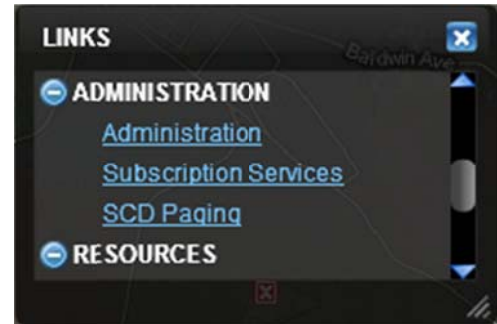

A broadband Internet connection suitable for fast downloads is recommended. The sites are optimized for a minimum resolution of 1024x768 pixels and require the use of JavaScript and Adobe Flash 10.0+ for dynamic content and navigational capability. PDC uses cookies for session management. Microsoft Internet Explorer 7.0+ and Mozilla Firefox 3+ are supported. List *.pdc.org as a trusted site to allow pop-up windows.

It is assumed that users are technically literate in the use of commonly used, commercially available software applications such as browsers, the Internet, and personal productivity tools (such as Microsoft Office).

How do I change my password?

Once you have been granted a UserID to one of the secured sites (which will be delivered via email after the registration and approval process is complete), access the Links palette within the application. Click on the icon in the menu bar (depicted at left) to open the palette, then scroll down to the section labeled “Administration.” Click on the Administration hyperlink to access the Update My Profile page. Note the hyperlink in the upper left-hand side of the webpage that says, “Update Password.” Users can also maintain their email address and other contact/identifying information on this page. If the user wishes to subscribe to email Active Hazard Alerts, click on Subscription Services to enter those preferences.
